DevPark

Software Development

About Us

We are here to bring your software in a Powerfull way

DevPark has been founded at 2013. From the beggining we have few simple rules to develop applications with the highest standards: ***write clean & scalable code*** *which allows an* ***easy maintanace*** *of created software.* We wanted to use gained experience and create things, from which we can be proud.

April 2013 – DevPark sp. z o.o. has been registered in Poland and we started to grow. Currently we have offices in Poznań, Piła and Kraków.

We Understand Business

and we can advice more in no-programming aspects too

Your success is our success

Because we have our own projects, which we also have to sell, we understand that the development process is only a part of your business (not the goal). We understand that your project is a toll to bring your ideas to live and it's only a part of a greater process. With such knowledge, we can propose solutions which can compromise the cost of development, required elements and still having good quality behind.

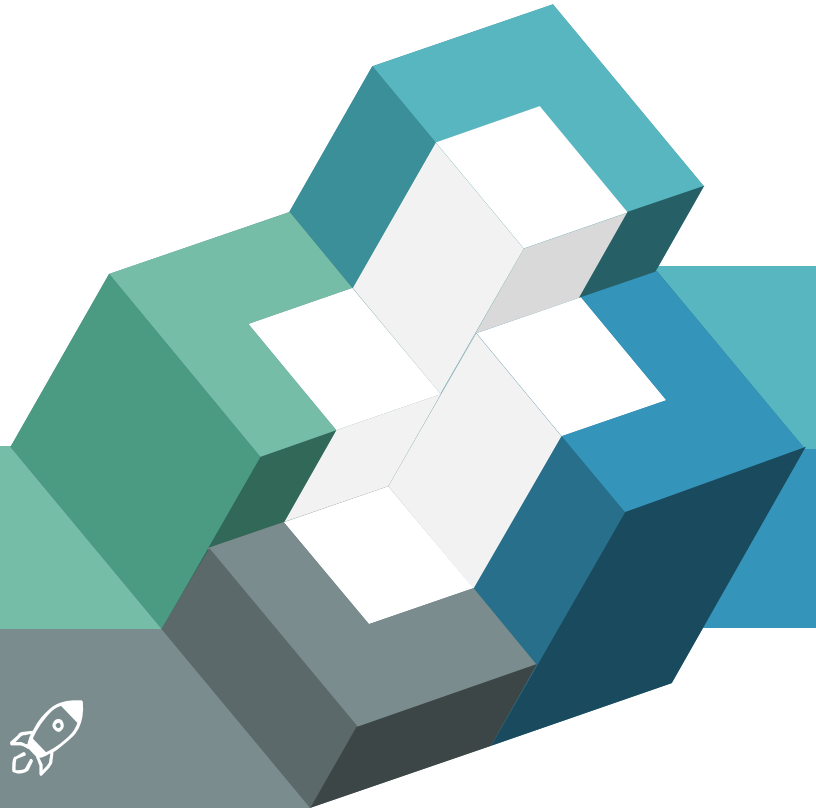
What We Offer?

We can help you on multiple ways



OUR SOFTWARE

We have our own dedicated software which helps in e.g. Project Management or Tickets Selling

AUDIT YOUR EXISTING CODEBASE

You want to confirm if your current developers produce a clean, scalable code? We can do it fo you.

OUTSOURCING PROGRAMMERS

If you require to rent a highy experienced programmers which will work directly with you

DEVELOP AND MANAGE YOUR PROJECT

We will bring your idea to a live, working solution

Our Experience

which our team gained by the past years

Management Software

By the past years, we have created software like access control system, ticket selling software with booking abilities OR project management

SaaS applications

Saas application are quite different than websites – you have to measure with the data security so that clients will not see others data. We know how to take care of that.

WebDevelopment

We know how to develope complicated websites with the best programming practices and using modern technologies.

3rd party services integrations

Do you want to integrate your software with some other API's? Or maybe even with a hardware? We did such things multiple times

Work Examples

easyrestaurantonline.com

This Saas software allows in an easy way to create restaurant website. It has also online ordering and table booking features.

Dzineny.com

Website with furniture catalog and designers presentations.Its based on a products catalog API as a backend, and VueJs + Wordpress on the frontend.

AgileBoard.me

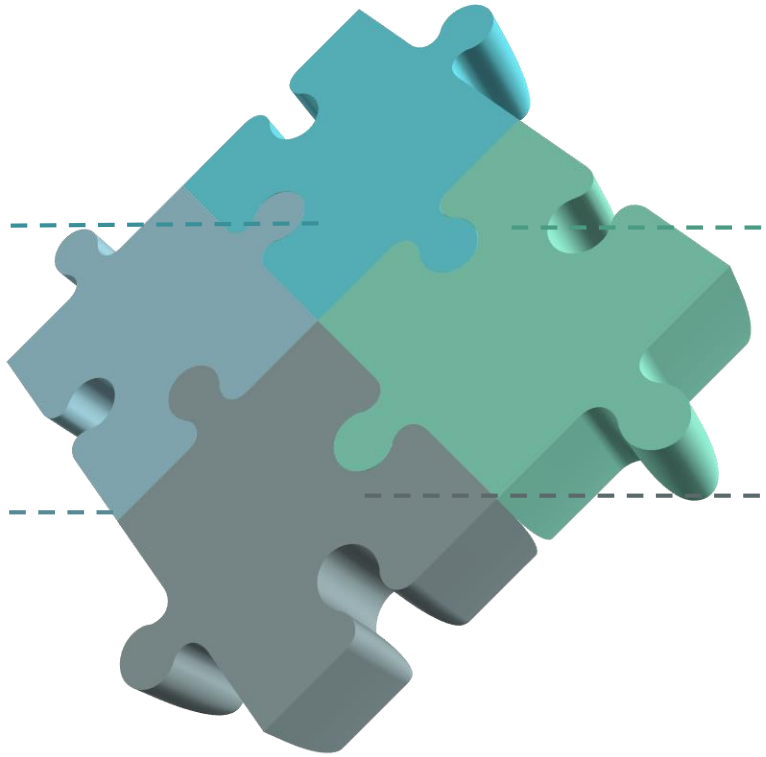
It's a Saas solution for project management and issues collecting system. We are using it also during our development, to help understand the current project status and monitor development progress.

Find much more directly

on our website at: www.DevPark.pl

Our Core Technologies

We are mostly experienced in WebDevelopment and the main technologies we use are:



Frontend Frameworks

AngularJs 1.x, 5

VueJs 2

Backend PHP Frameworks

Laravel 4.x, 5.x

Zend 1.x

Databases

Postgresql

MySql

Styling

Bootstrap

MaterialDesign

WebPack (to organize Js and Sass)

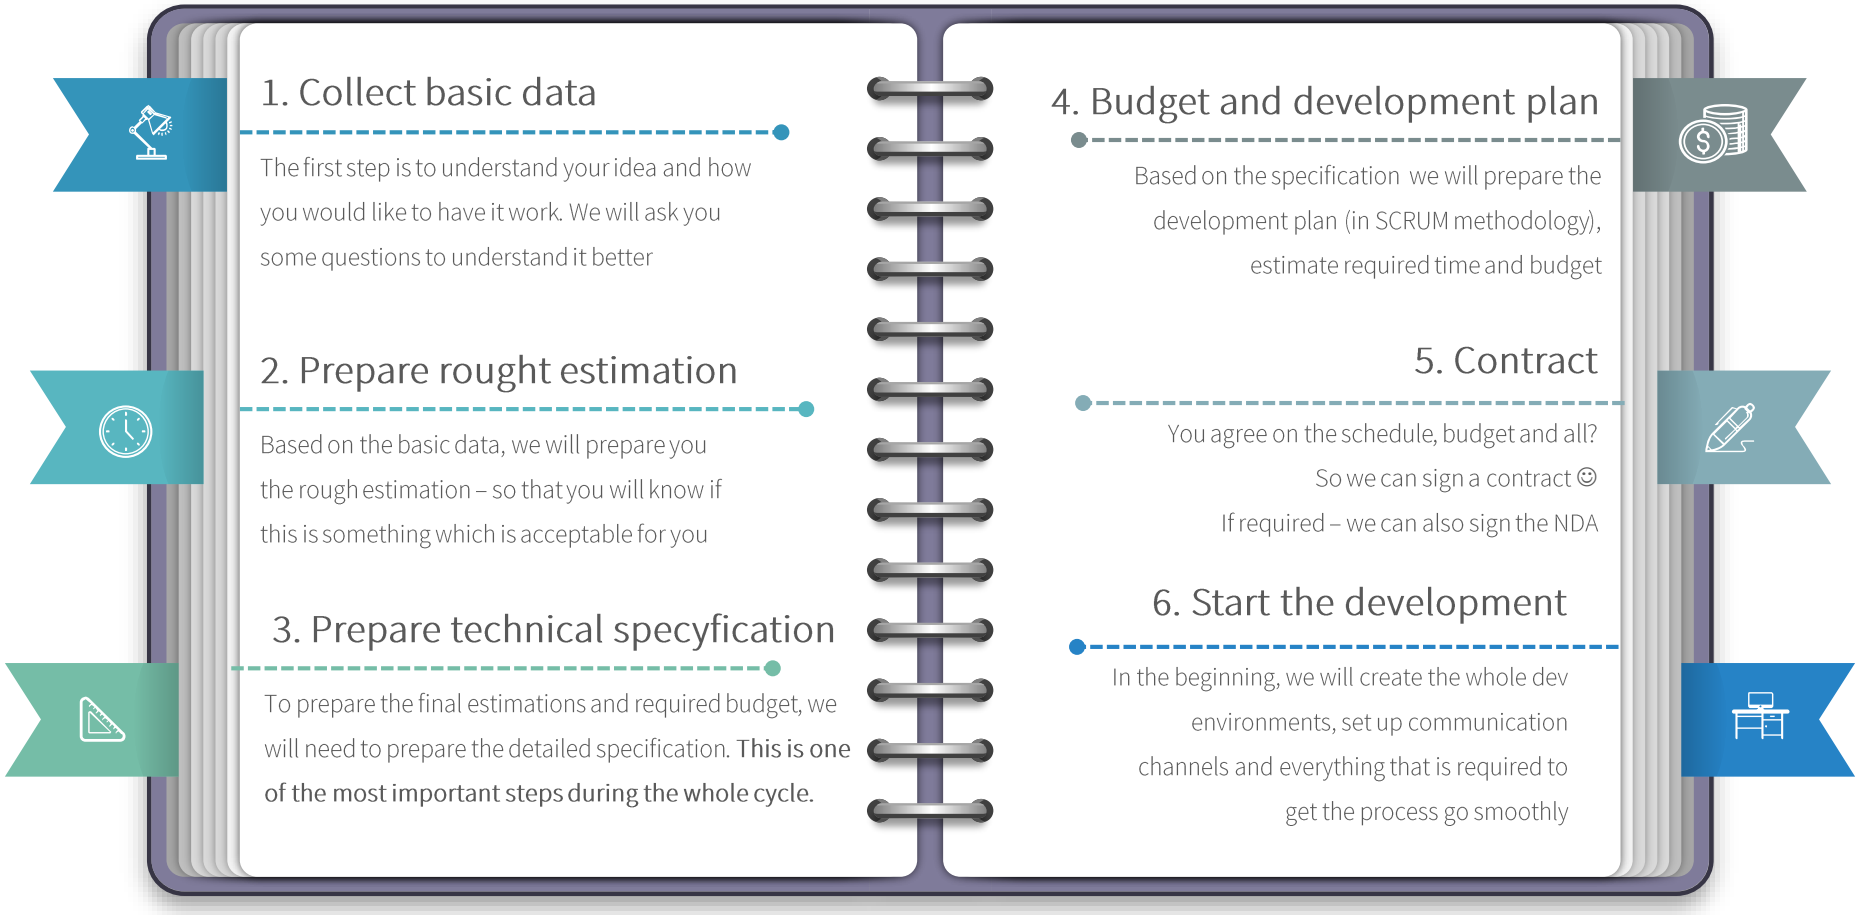
How We Prepare to Your Project?

We know that time and budget are one of the most important things



1. Collect basic data

The first step is to understand your idea and how you would like to have it work. We will ask you some questions to understand it better

2. Prepare rought estimation

Based on the basic data, we will prepare you the rough estimation – so that you will know if this is something which is acceptable for you

3. Prepare technical specyfication

To prepare the final estimations and required budget, we will need to prepare the detailed specification. This is one of the most important steps during the whole cycle.

4. Budget and development plan

Based on the specification we will prepare the development plan (in SCRUM methodology), estimate required time and budget

5. Contract

You agree on the schedule, budget and all?
So we can sign a contract ☺
If required – we can also sign the NDA

6. Start the development

In the beginning, we will create the whole dev environments, set up communication channels and everything that is required to get the process go smoothly

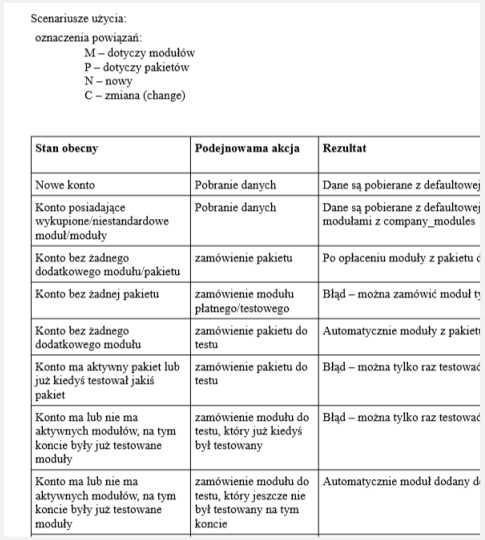
Specyfication Parts

As mentioned ,technical specyfication contains the most important details about your system.
It's not the same as the project brief (mostly send to us).
Here we described the most important parts included in it (but it's more then that)

User Stories



Scenariusze użycia:

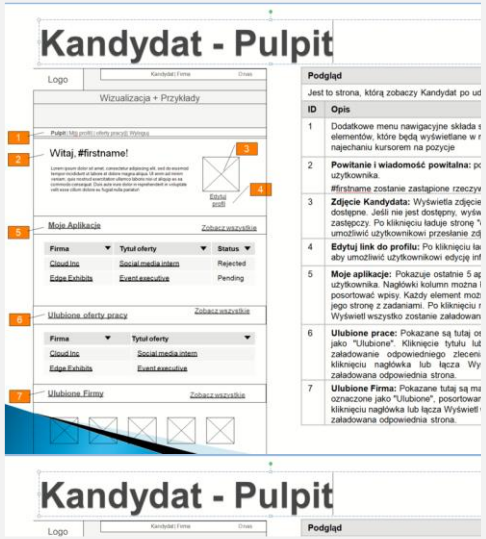
oznaczenia powiązań:

M – dotyczy modułów
P – dotyczy pakietów
N – nowy
C – zmiana (change)

Stan obecny	Podejnowama akcja	Rezultat
Nowe konto	Pobranie danych	Dane są pobierane z defaultowej
Konto posiadające wykupione/niestandardowe moduł/moduły	Pobranie danych	Dane są pobierane z defaultowej modułami z company_modules
Konto bez żadnego dodatkowego moduhu/pakietu	zamówienie pakietu	Po opłaceniu moduły z pakietu c
Konto bez żadnej pakietu	zamówienie modułu płatnego/testowego	Błąd – można zamówić moduł t
Konto bez żadnego dodatkowego modułu	zamówienie pakietu do testu	Automatycznie moduły z pakiet
Konto ma aktywny pakiet lub już kiedyś testował jakiś pakiet	zamówienie pakietu do testu	Błąd – można tylko raz testowa
Konto ma lub nie ma aktywnych modułów, na tym koncie były już testowane moduły	zamówienie modułu do testu, który już kiedyś był testowany	Błąd – można tylko raz testowa
Konto ma lub nie ma aktywnych modułów, na tym koncie były już testowane moduły	zamówienie modułu do testu, który jeszcze nie był testowany na tym koncie	Automatycznie moduł dodany d

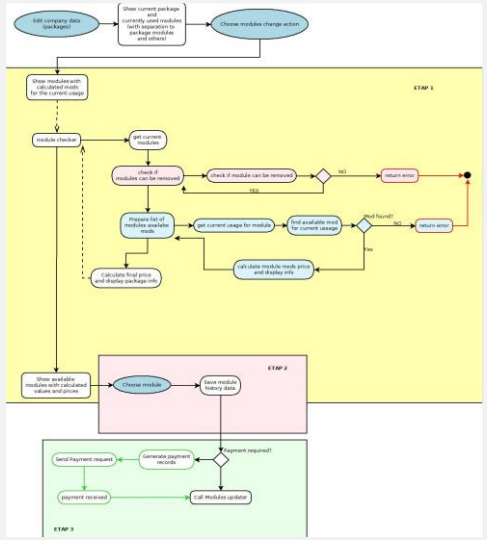
This will help to identify user features, how your website will be used and what are the expected results

Pages Sketch



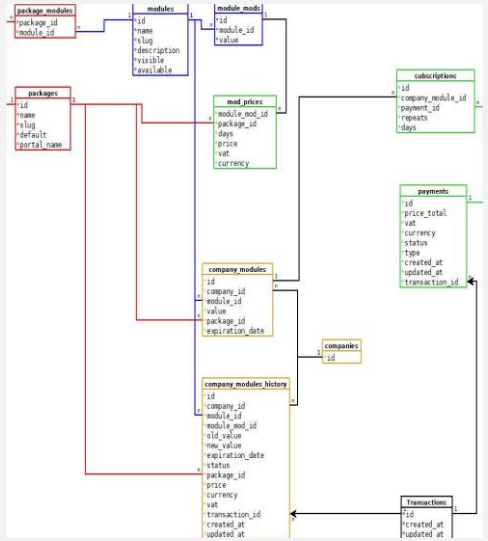
You will be able to define the used forms, plan the UI and UX and much more.

Flow Diagrams



It's something in the middle between you as a client and us as a development team. Based on it we will be able to proceed to the next steps.

Database Schema



Will identify the collected data, its structure, and relations

Our Working Principles

We always try to follow with the most effective, modern methodologies of software development.

AGILE way

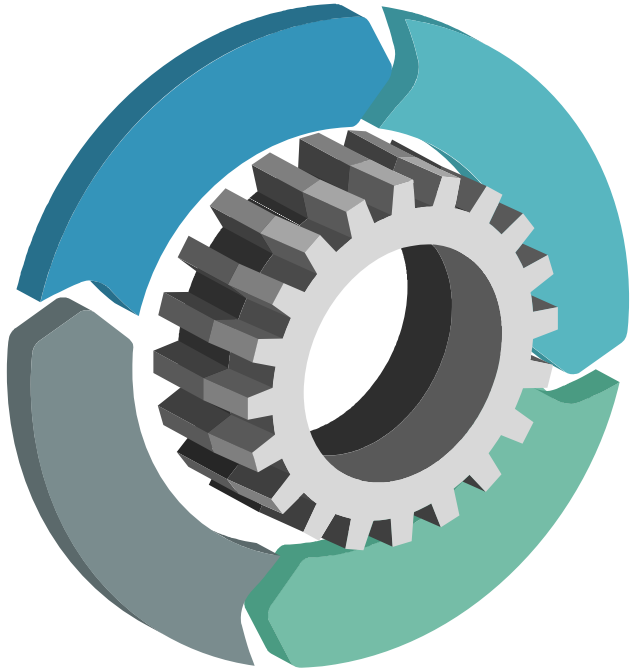
We prefere to work in an AGILE way

Which is much more flexible then popular Waterfall process

SCRUM

As a part of AGILE, we follow the SCRUM way

Our management software is prepared for this process. For the existing application, we can switch to KANBAN.



Automation

We do like to save time where it is possible

That's why we use Continuous Integrations and Continous Deployment

Right Person

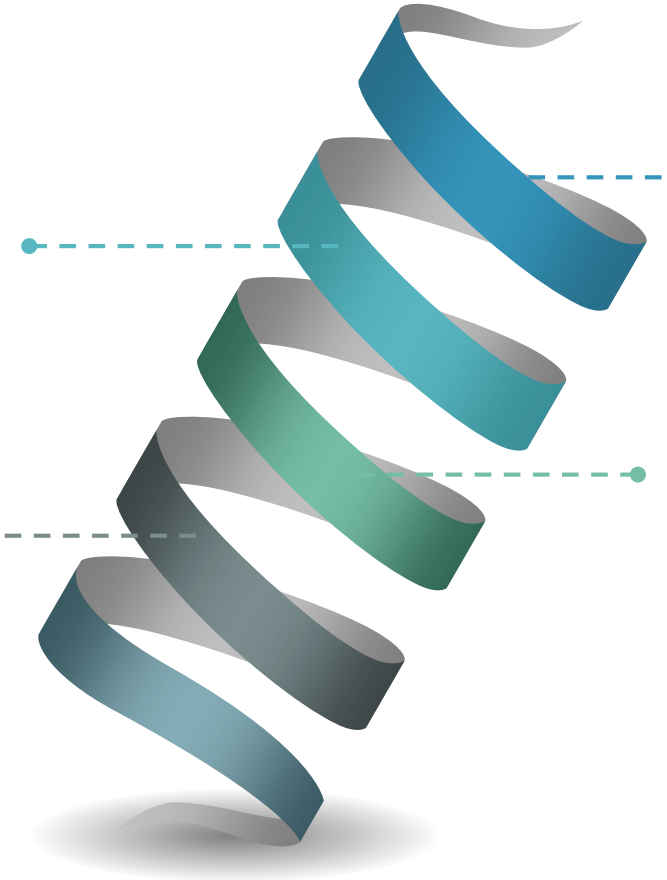
Nobody knows everything, thats why

we choose a proper person for the specified tasks. (e.g. we don't require programmers to be servers administrators. We have dedicated person for that._

© 2018 DevPark All rights reserved

Communication Channels

We know that good communication is a key to success. (specifically in remote work)
If you required – you can have contact which each of development team members.



SCRUM StandUps

We do like voice meetings with Client

At least at the beginning of each sprint, but even better – at the beginning of each week

AgileBoard.me – Management Software

Things to do should be organized

That's why we use dedicated software, which helps to organize tasks to do and present development progress in a clear way. The tasks are described well, and also can be commented.

Voice Calls (phone, skype, appear.in….)

The voice communication is the most effective way

We are using multiple tools for that, which include conferencing, screen sharing and more

SLACK - Direct Chat Messaging

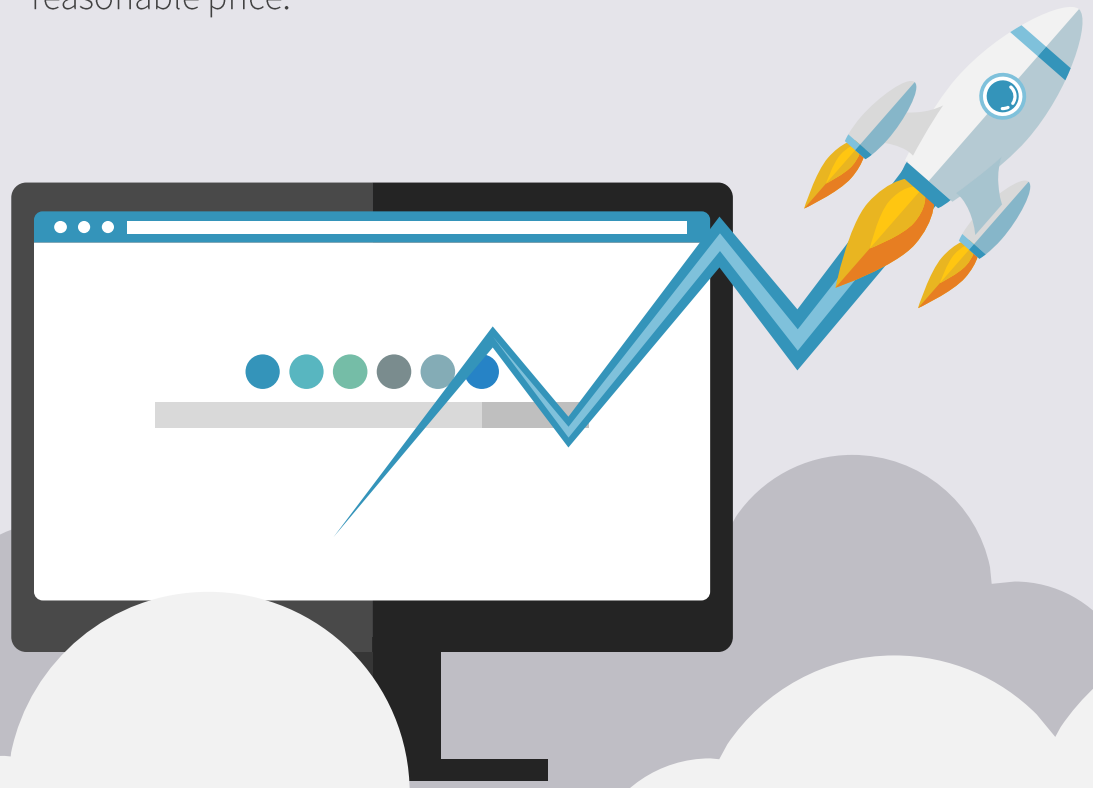
You can have instant contact with us

This way we can ask and answer questions about unexpected things quite fast. We use slack for that – which is far more effective then emails communication.

© 2018 DevPark All rights reserved

Price

At the end – we know that everything should be done in a reasonable price.



Project Development – contact us.

As described in the previous pages, we will estimate your project based on your requirements.

Outsourcing

It depends of the required skills and programmer experience and the amount of work which you will have.

Please contact us to get hourly rates
